SUMMARY

Computer Science student at UCF and aspiring Data Engineer. Currently balancing full-time academic studies with shift leadership and a role as **Captain** of the Royalty Dance Troupe (BSU). I am focused on building independent technical execution through projects. I am looking to apply my discipline and analytical curiosity to internships in Data Engineering, Data Analytics, or Software Engineering.

EDUCATION

University of Central Florida
Bachelor of Science in Computer Science

Orlando, FL
Expected: May 2027

PROJECTS

UCF Study Space Pipeline | *Python, Pandas, PostgreSQL, Tableau* Present

- Architecting an end-to-end pipeline to extract and clean geodata from APIs to rank local study spots.
- Utilizing **Pandas** for data transformation and **PostgreSQL** for structured storage of location attributes.
- Designing a **Tableau** dashboard to visualize occupancy, amenities, and distance metrics for student users.

Relational Database | *MySQL, MySQL Workbench, MS Access* Jan. 2026 – Present

- Developed a **MySQL** database normalized to **3NF** to eliminate redundancy and ensure relational integrity.
- Authored SQL triggers to automate backend updates, including real-time salary and budget synchronization.
- Built parameterized queries in **MS Access** to filter and extract business insights from large-scale datasets.

Chore Bear | *Excel, Figma, UX Research* Sept. 2025 – Dec. 2025

- Defined system requirements for a household management app based on a pipeline of **28** survey responses and **8** interviews.
- Engineered an **Excel** tracking schema to identify a navigation bottleneck causing a **3x increase** in task latency.
- Optimized functional logic and user flows to achieve **80%** user retention intent and 100% consistency ratings.
- Facilitated collaboration within a **6-person** team to translate raw behavioral data into an interactive prototype.

Technical Scripting Portfolio | *Python, Tkinter, Turtle, Git, VS Code* Aug 2023 – Present

- Engineered a **GUI-based** calculator using (**Tkinter**) to manage real-time arithmetic logic and event handling.
- Developed **15+** automated scripts for data visualization and logic puzzles using the **Turtle** library.

EXPERIENCE

Shah's Halal Food | *Service Lead* Aug. 2024 – Present

- Maintain high-speed operational efficiency while balancing a **20+ hour work week** and a full-time engineering curriculum.
- Achieved a **5.0** average rating and a **1.3% order error rate** by overseeing quality control and order accuracy for a high-volume team.

TECHNICAL SKILLS

Languages: Python (Tkinter, Pandas), SQL (MySQL, PostgreSQL), C, Java, R, LaTeX

Tools: GitHub, MySQL Workbench, MS Access, VS Code, Tableau, Excel

Certifications: Data Analyst in Python (DataCamp)

INVOLVEMENT

National Society of Black Engineers (NSBE) | *Member* Aug. 2025 – Present

- Attended the **NSBE Regional Conference** to network with recruiters from large tech companies, securing 28+ professional connections via **LinkedIn**.
- Engaged in **10+** hours of community service through park cleanups and university football game operations to support chapter outreach.
- Attended bi-weekly general body meetings, collaborative study sessions, and workshops to strengthen peer connections and academic performance.
